Floods in London.

There was a time when high tides on the Thames might have emptied London, for there is on record an instance of a general exodus from London through fear of the overflowing of the river. It was in 1524 that the astrological experts almost all agreed in predicting that on a certain day the Thames was going to overflow the city, and for weeks beforehand the population was busily engaged in moving itself and its belongings into the country. In fact, the only unmoved person was Father Thames, who on the great day quite failed to rise to the occasion, thereby placing the prophets in some danger of maltreatment at the hands of the deceived emigrants.—London Chronicle.

Strength of Bone.

The wonderful power of bone structure has been tested scientifically to show how hollow bone bears strain. A very small bone, only one square millimeter (.0155 square inch) in diameter, will hold thirty-three pounds in suspension without breaking, while a piece of the best oak of the same thickness will hold up only twenty-two pounds. The bone is therefore half again as strong as the solid oak. Nature is economical in the weight given to bones, making them hollow and at the same time making them stronger than if they were solid and much heavier. This principle has been recognized in mechanics, as engineers use hollow steel tubes instead of solid to meet great strain.—Family Doctor.

Applause.

This act opens with the wife addressing her husband severely.

"John, a messenger from my dressmaker called on me this afternoon."

"Bring anything pretty?" yawned the husband.

"She did. A very pretty thing. It was a note saying that my dressmaker will not make me any more clothes until you pay the bill we owe her."

"Did your dressmaker send a note like that?"

"She did!"

"Bless her, bless her!"—Los Angeles Herald.

Curious Mexican Relic.

A weird looking creature is that known to scientists as the mysterious tone lizard of Cuernavaca, Mexico. This reptile, carved on a huge boulder lying on an overgrown hillside, is situated about eight miles from Cuernavaca and seventy miles southwest of the City of Mexico. It was there, centuries old, when Cortes first saw Cuernavaca and is supposed to have been carved to commemorate some events in the wanderings of the prehistoric civilized race which built the great palace at Xochicalco, a few miles away.—Wide World Magazine.

Heat From the Sun.

One square yard of the earth's surface receives each day averaging six hours of sunshine, an amount of heat equal to that contained in 1.8 pounds of coal. At this rate an area of about 1,200 miles receives during a year an amount of energy from the sun equivalent to that obtainable from the 1,100,000,000 tons of coal mined annually in Europe and the United States.

HUSBAND RESCUED DESPAIRING WIFE

After Four Years of Discouraging Conditions, Mrs. Bullock Gave Up in Despair. Husband Came to Rescue.

Catron, Ky.—In an interesting letter from this place, Mrs. Bettie Bullock writes as follows: "I suffered for four years, with womanly troubles, and during this time, I could only sit up for a little while, and could not walk anywhere at all. At times, I would have severe pains in my left side.

The doctor was called in, and his treatment relieved me for a while, but I was soon confined to my bed again. After that, nothing seemed to do me any good.

I had gotten so weak I could not stand, and I gave up in despair.

At last, my husband got me a bottle of Cardui, the woman's tonic, and I commenced taking it. From the very first dose, I could tell it was helping me. I can now walk two miles without its tiring me, and am doing all my work."

If you are all run down from womanly troubles, don't give up in despair. Try Cardui, the woman's tonic. It has helped more than a million women, in its 50 years of continuous success, and should surely help you, too. Your druggist has sold Cardui for years. He knows what it will do. Ask him. He will recommend it. Begin taking Cardui today.
